## Response to Submissions Report underway

Health Infrastructure would like to thank the community and stakeholders for lodging submissions and providing feedback during the public exhibition period for the Tweed Valley Hospital Environmental Impact Statement (EIS) and site-specific State Environmental Planning Policy (SEPP).

The project team is busy reviewing the submissions and working through solutions to address concerns raised by the community and government agencies.

A Response to Submissions Report is being prepared and will be lodged with the Department of Environment and Planning in early 2019. This will be made public, as part of a transparent and accountable process.

The NSW Government's \$582 million investment in health for the Tweed-Byron region will deliver a new major regional referral hospital as well as interim upgrades at the existing Tweed Hospital to help meet health service needs for the community.

Visit the Tweed Valley Hospital Development website for news as it becomes available.

For further information regarding the Tweed Valley Hospital development or the EIS process, please visit the project website at [www.tweedvalleyhospital.health.nsw.gov.au](http://www.tweedvalleyhospital.health.nsw.gov.au)
